

“Study on Breast Size & Spinal Muscular Conditions among Women”

Is there a link between breast size and types of brassiere on spinal muscular conditions such as low/mid back, neck, chest and breathing discomfort?

Aim of study

Perth Integrated Health Clinic is conducting a study to investigate the relationship between women's breast size and types of brassiere on the incidence of spinal muscular conditions (e.g. mid and low back pain or discomfort).

What is involved with the study?

- Completing a questionnaire
- A spinal muscular assessment conducted by a qualified female Occupational Therapist at the Perth Integrated Health Clinic.

For more information or if you would like to participate in the study please contact the researchers:

***Lucy Liongue & Ann Carbone, Consultant Occupational Therapists on 9226 1239 or email lucy@pihc.com.au
41 Havelock Street, West Perth***

Participants in the study are entitled to a complimentary bra fitting with any bra purchase at Wendy's Lingerie, 1228 Hay Street West Perth, Ph: 9321 4139.
