

KEY MODULE TREATMENTS

Lipomassage™

Lipomassage™ is the new revolutionary treatment attacking stubborn fat that is resistant to diet and exercise. This non-invasive and scientifically proven spot fat treatment specifically targets trapped fat which is typically located in the thighs, hips, stomach, knees and arms.

A protocol of Endermologie®, Lipomassage is also based on the international phenomenon of independently motorised rollers and negative pressure. The mechanisms of Roll'In™, Roll'Up™ and Roll'Out™ each have very specific objectives to slim, firm, resculpt and smooth.

Endermotherapie®

Endermotherapie® uses the most affective modalities to heal sickness, eliminate pain and enrich quality of life. It is used internationally to provide physiological support vital to health. Endermotherapie® aids in the natural rehabilitation process of the connective tissue for optimum health.

The therapeutic applications include the treatment of burns, scars, venous insufficiency and lymphoedema. It is also widely used for pre and post surgery to prepare the connective tissue for surgical trauma, reduce scar tissue formation, and accelerate recovery after surgery.

Endermosport®

Endermosport® is a revolutionary treatment to optimise athletic technique, performance, recovery and muscle definition for athletes that strive for perfection. With goals always focusing on the win, they push their bodies to exceed their own limits, training hard to attain peak performance and meet the challenge of conquest.

Endermosport® supports every phase of the training, performance and recovery cycle. Targeted, customised treatment is delivered directly to the muscles and surrounding tissues, infusing the area with increased circulation and eliciting an immediate positive response. Treatments enhance performance and reduce Delayed Onset Muscle Soreness (DOMS) while also achieving a greater range of motion. Endermosport® allows athletes to perform to their full potential.
