

5 May 2009.

Mr Graeme Drummond  
Managing Director  
WBV Australia Pty Ltd

Dear Graeme

**RE: CLINICAL ENDORSEMENT OF THE WBV 3000**

The Perth Integrated Health Clinic (PIHC) has been privileged to be associated with WBV Australia Pty Ltd now for the past three years.

During this time, we have established excellent rapport with the national distributor for the WBV 3000 who have been very forthcoming in their technical support, clinical assistance and provision of information which has assisted us in the incorporation of the WBV 3000 into our clinical practises.

Clinical

In 2009, the WBV 3000 is now used as a conjunctional clinical device in addition to the neuromuscular and exercise physiology programs provided by our clinicians.

PIHC patients undertake the WBV 3000 as part of their treatment program and till date we have administered in excess of 50 000 WBV sessions per annum which amounts to an excess of 150 000 WBV sessions in three years.

We have incorporated the use of the WBV 3000 seamlessly into the treatment plan of our patients and the majority of them are well schooled in the usage of this machine with minimal supervision while at the same time corresponding to a planned review as the usage of the machine is progressive from the neuromuscular clinical application to the strengthening and toning in exercise physiology.

## Technical Support

Given that our WBV 3000 machines are used from Mondays to Saturdays at our clinics from 6 am to approximately 7 pm the lifespan and the workability of the motor system within each unit is indeed impressive.

Any minor technical issues that we may have had have been resolved within 24 hours and this is in itself a very important and critical issue for continued clinical operations. Our practitioners often comment that they wished the response time for maintenance and upgrades for our other clinical equipment was as quick and as responsive from the point of the agents as they are with WBV Australia Pty Ltd.

## Research

Following on positive feedback provided by patients and practitioners alike, PIHC embarked some two years ago in conducting a pilot research project to determine the efficacy of the WBV 3000 with neuromuscular conditions. The results predictably were very positive in many aspects of such conditions in particular lumbar, lower extremities and mid back conditions.

The research was conducted independently of WBV Australia Pty Ltd in conjunction with independent researchers from the local Universities at the Honours and Masters level of tertiary studies.

## National Training

In addition to its clinical services, PIHC also conducts numerous and extensive medical consultancy services for companies and organisations.

In Dec 2007 and once again in March 2009, PIHC conducted the national training program for WBV Australia Pty Ltd involving the provision of clinical information, research and sales marketing to WBV agents throughout Australia.

This involvement in many ways cumulates the professional relationship that we have with WBV Australia Pty Ltd as ongoing testimony to the endorsement that PIHC has with their product, the WBV 3000.

Yours sincerely

Ian Wee  
Director  
Perth Integrated Health Clinics
